## What is claimed is:

- 1. A magnetic recording medium comprising a lower non-magnetic layer containing at least a carbon black and a radiation curing type binder resin on a non-magnetic support and an upper magnetic layer having a thickness of 0.30 µm or less on the lower non-magnetic layer, wherein the upper magnetic layer contains at least a ferromagnetic powder, a binder resin, and an abrasive having a Mohs hardness of 6 or higher and a smaller average particle size than the thickness of the upper magnetic layer.
- 2. The magnetic recording medium according to claim 1, wherein the thickness of the upper magnetic layer is 0.05 to 0.30  $\mu m_{\odot}$
- 3. The magnetic recording medium according to claim 1, wherein the average particle size of the abrasive is 0.01 to 0.2  $\mu$ m.
- 4. The magnetic recording medium according to claim 1, wherein a centerline average roughness (Ra) of the upper magnetic layer surface is 1.0 nm≤Ra≤8.0 nm.
- 5. The magnetic recording medium according to claim 1, wherein the abrasive contains two or more kinds of abrasives which have different average particle sizes to each other.
- 6. A process for producing a magnetic recording medium which comprises:

preparing respectively a lower non-magnetic layer

coating material including at least a carbon black dispersed into a radiation curing type binder resin, and an upper magnetic layer coating material including at least a ferromagnetic powder, and an abrasive having a Mohs hardness of 6 or higher and a smaller average particle size than a thickness of an upper magnetic layer to be formed into a binder resin,

applying the lower non-magnetic layer coating material onto a non-magnetic support, drying the coating material, and carrying out smoothing treatment of and irradiating with radiation to resulting layer to form a lower non-magnetic layer, and then

applying the upper magnetic layer coating material onto the lower non-magnetic layer, drying the coating material, and carrying out smoothing treatment of resulting layer to form an upper magnetic layer.

- 7. The process for producing the magnetic recording medium according to claim 6, wherein an orientation treatment is carried out after the upper magnetic layer coating material is applied.
- 8. The magnetic recording medium according to claim 1 which is produced by the process according to claim 6 or 7.
